

Vitalii Oshchenkov

Full-Stack Engineer (Node.js / React)

v.oshchenkov.es@gmail.com | linkedin.com/in/vitalii-oshchenkov

Current location: Alicante, Spain. (Spain work permission + Ukrainian ФОП 3)

SUMMARY

Full-Stack engineer (focus on Front End) with 10+ years of production experience mostly with e-commerce projects and banking. Strong background in optimizing high-load, widely used services. I enjoy solving challenging technical problems that require critical thinking and creative solutions beyond standard approaches.

SKILLS

Front End:

JavaScript, TypeScript, React, Next, TanStack(query, form), Zustand, Zod, Vue, Nuxt, Playwright, Jest, Vite, Webpack

Back End:

Node.js, Express, PHP, AWS(S3, Lambda, SNS, SQS)

AI: Claude, Codex, Cursor, OpenAI API

CMS: Magento 2, Yii2, Laravel, WordPress

DB: PostgreSQL, Redis, MySQL, MongoDB

Ops: Linux, Docker / Docker Compose, CloudFlare, CI/CD pipeline

Languages:

English(B2), Ukrainian(C2), Russian(C2), Spanish(A1)

WORK EXPERIENCE

Omnico | Full Stack Engineer | May 2021 - Feb 2026

- Diagnosed and eliminated critical memory leaks, improving Node.js server performance by 20% and ensuring long-term application uptime in high-traffic production environments. It saved the company from having to spend money on additional RAM memory.
- Spearheaded front-end performance initiatives that boosted Core Web Vitals by 30%, directly increasing conversion rates for global retail brands ([Puma](#), [Adidas](#), [New Balance](#), [MDFashion](#), and [Ultrashop](#))
- Headed Frontend Modernization: Migrated legacy Yii 2 monoliths into scalable, modern architectures using Next.js (React) to guarantee long-term system maintainability and establishing a 99% type-safe system with TypeScript.

- Engineered Server-Side Caching Strategies: Designed and implemented configurable server-side caching mechanisms utilizing Redis and Varnish, maintaining flawless system stability during major peak holiday traffic surges.

VIS-A-VIS | Frontend Developer | Feb 2020 - May 2021

- Applied strict design patterns, automated testing, and performance optimization best practices for major enterprise clients, including [Raiffeisen Bank](#) and [Vodafone](#).
- Developed highly complex, multi-step application forms featuring intricate validation logic and bulletproof global state architectures.
- Led Legacy Code Modernization: Refactored fragile legacy codebases into highly modular, reusable components, drastically reducing future development time and debt.
- Modernized Build Infrastructure: Owned the overhaul of the frontend build pipeline, orchestrating a seamless migration from legacy Webpack 2 to Vite to accelerate developer velocity and optimize production asset delivery by 40%.

UpWork | Full Stack Engineer | May 2021 - Nov 2025

- Designed and engineered bespoke WordPress ecosystems completely from scratch, including custom theme development, database configurations, and scalable frontend architectures.
- Directed performance optimization initiatives that significantly reduced page load times and maximized Core Web Vitals, directly improving client SEO rankings and user engagement.
- Delivered robust code quality prioritizing bulletproof cross-browser compatibility, high scalability, and clean component structures for effortless long-term maintenance.

Bayel | Web Developer | June 2014 - Aug 2015

- Built and maintained website with php, HTML, CSS, JavaScript.
- Implemented SEO optimization and Google Ads campaigns.
- Improved site speed and content management workflows.

EDUCATION

Bachelor of Information technology and automatization.

National Aviation University. | Kyiv, Ukraine | Sep 2008 - May 2013

Graduate work: - [smart house](#) (automatic lighting control and temperature control).
